

PILLO-PAK

Unmatched Speed & Precision

The PI200 Pillo-Pak is the new industry leader in high-speed bulk-packaging solutions for industrial bun lines looking to increase their output. It is specifically designed to arrange, slice and bulk package up to 1,200 buns per minute in the configurations typically demanded by fast food restaurants and other institutions that buy in bulk.

P-I 200 IMPROVEMENTS

- Cross, side and center sealing elements for increased speed, efficiency, consistency and quality
- Sanitary design and machine safety makes this design innovation a high-performance solution
- Package rate in excess of 40 and quality seals drive the ROI for this machine
- Improved grouper allows for holding of each lane and more product variability down to 2 ½" diameter

FEATURES & BENEFITS

1. LANE GUIDES

A grouper with individual lane hold down plates

2. FILM FEED SPINDLES

Unwind stand with pneumatic air shaft

3. VACUUM BLOWER

Evacuates the air from the package

EASE OF OPERATION

- User-friendly HMI with swing arm
- Recipe-driven automatic settings
- Plastic belting conveyor and maintenance-free adjustable product guides enhance lane balancing
- Adjustable lane sensors and operator-selectable lane blocking
- Quick-change impulse sealing cross bar

IMPROVED PRODUCT QUALITY

- Taller accumulator lane guides reduce product sanding and damage
- Pneumatic air shaft for film feed roller to replace core chucks
- Increased sealing wheel widths for consistent film sealing
- Vacuum blower removes excess air from package for longer shelf life

GREAT ACCURACY AND EFFICIENCY

- Independent upper and lower belt speed control for improved slicing accuracy
- Dual slicer blade braking systems for safety
- Electric seal wheels controlled independently for uniform sealing temperature control
- One active and one standby film spindles for easy changeovers
- Highly accurate temperature control (± 0.1 percent of input range)
- Independently powered sealing wheels for consistent package forming
- Servo driven seal bar for uniform sealing pressure

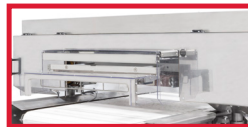

OPTIONS AVAILABLE FOR GREATER AUTOMATION

- Imprint coder / thermal transfer printers
- Traveling seal bar allows rates of to 50 packages per minute
- Center seal and package perforator / separator for dividing packages
- Adjustable Tri-Pak sealer for multiple center seals
- Package compression wheels for tight pillo / basket fits
- Direct feed integrated basket conveyors absorb less floor space

5. DUAL SLICER BLADE

5 possible basket conveyor configurations capable of conveying 7" high baskets underneath the product conveyor

4. OPERATOR PANEL

Control the machine from either side
