

DISRUPTIVE BULK BUN PACKAGING WITH MAP

THIS IS
INNOVATION

THIS IS
MIDDLEBY

The new MAP-PAK 20 by Stewart Systems is the first of its kind. By adding MAP (Modified Atmosphere Packaging) sealing and gas technology to our current Pillo-Pak, customers will be able to achieve an extended shelf life in a bulk format package for individual (QSR) buns.

The MAP-PAK 20 was developed in conjunction with our sister company CV-TEK, an innovative leader in modified atmosphere packaging equipment. If you have other products you think might benefit from this technology, please check out their applications at www.cv-tek.com.

Potential benefits:

- Increased shelf life by lowering free water in the package
- Reduction in mold growth by modifying the atmosphere
- Preservative free product (Clean Label)
- “Fresh, never frozen” claim possible
- Eliminate the freezing process
- Save on distribution cost
